Traffic Central – Integrated Traffic Management System

Transnomis Solutions

Traffic Central is a scalable traffic management platform that unifies devices, data, permits, and public communications into one map-based interface. It can be deployed as a cloud platform or as an advanced ATMS supporting thousands of devices.

Description

Key Features

- Device control & monitoring (signals, sensors, VMS, CCTV)
- Integrated incident, construction, and congestion management
- Travel information and public-facing communications
- Dashboards, reporting, and analytics
- Data importing for loop counts, movement counts, and sensor feeds

Specifications

Benefits

- One platform instead of multiple disconnected systems
- Improved cross-agency coordination
- Enhanced operational clarity for traffic center staff

Use Cases

- Traffic control centers
- Regional traffic corridor monitoring
- Mobility and congestion management programs
